

PRESS RELEASE

With Keeway Motor's new facility

Nadico continues transforming the landscape of Spain's industrial Parks

Covering an area of 5,800 m², this unique building, designed for logistics operations, blends aesthetics, functionality, environmental care, and safety.

Parets del Vallès, October 1, 2024 – Engineering firm Nadico has announced the delivery of a new logistics building project, this time for Keeway Motor, a company present in 73 countries and with which it shares values of innovation and excellence.

Spanning 5,800 m² across ground and upper floors, this distinctive office and logistics facility is located just 25 minutes from the city of Barcelona and about 50 km from El Prat Airport.

The building stands out for its organic shape. Its rounded volumes add dynamism and create interesting shadow play on the façade, while also enabling large curved-edge glass windows that maximize natural light. The lattice cladding with wood-effect lacquered aluminum slats gives the building warmth and harmony with its surroundings. Its warm nighttime lighting enhances its shape in context, while maintaining key technical standards, such as avoiding glare. All this turns the building into the perfect showcase for the brand.

Regarding the ventilation, lighting, HVAC, and sanitary water systems, Nadico prioritized occupant comfort while also optimizing performance and minimizing the carbon footprint. In addition, they made use of the site's orientation to install a 250 kW photovoltaic system on the roof.

Beyond technical, aesthetic, and functional aspects, Nadico has also focused on people's safety and worked to exceed the requirements of Spain's Fire Safety Regulations for Industrial Establishments and the Technical Building Code (CTE).

For Jordi Codina, CEO of Nadico, "This is a project of spectacular beauty and functionality. We are very proud of the entire NADICO team who participated in it, both from the Projects area (construction, facilities, and environment) and from the Construct Management division. We are also extremely grateful for the trust placed in us by such a key client as Keeway Motor. Projects like this drive us to keep working with excellence and commitment to improve both the aesthetics and functionality of Europe's industrial zones."

Keeway's facility stands out for its organic form. Its rounded volumes create dynamism and interesting shadow patterns on the façade, while allowing large curved-edge glass windows to harness natural light.

Always in harmony with the environment, Nadico took advantage of the plot's orientation to install a 250 kW photovoltaic system on the roof of Keeway's facility.

About Nadico

With seven offices across Spain and one in Morocco, and over 30 years of experience, Nadico is a group specialized in engineering and architectural projects mainly focused on industrial, logistics, and office sectors, as well as consulting services.

Nadico's clear service-oriented approach integrates cutting-edge digital tools and advanced materials in all its projects, along with a constant focus on people and the environment.

The design of singular buildings, implementation of BREEAM® and WELL certifications, and efficient energy management are part of Nadico's DNA, which currently employs more than 140 highly specialized in-house professionals.
