

PRESS RELEASE

Grupo Clapé and Nadico: Redefining Industrial Architecture

Over the course of more than 15 years, Grupo Clapé has entrusted Nadico with the design of more than 100,000 m² of industrial buildings. Clapé has sought to transform the mindset of what an industrial building should be, with one very clear idea: to improve the surrounding environment. Both companies have gone "beyond", with an architectural, aesthetic and distinctive vision.

Parets del Vallès, 3 September 2026"We try to ensure that every project we undertake improves the environment in which we are located," says **Santi Clapé, CEO of Grupo Clapé**, the leading developer of industrial buildings and logistics platforms in Barcelona, with more than 30 years of experience in the construction sector, distinguished by the quality and uniqueness of its assets.

For more than 15 years, Grupo Clapé has worked with Nadico with a distinctive vision: to change the mindset and stop conceiving construction in this sector as a grey and polluting industry.

As a result, Grupo Clapé and Nadico have built countless industrial buildings that stand out for their innovative design and cutting-edge solutions, with the highest levels of quality. In fact, looking back, **Santi Clapé** says: **"Which is the best building of all those we have built? The next one!"**

For **Jordi Codina, CEO of Nadico**, the challenge was to strengthen the company's architecture team with the incorporation of architect Ignasi Reventós. **"The idea was to seek distinctive aspects, complementing design with engineering. At Nadico, we create buildings that add value, but above all are designed for people,"** he says.

"I see constant evolution; there is a shared passion on both sides for doing an excellent job. The combination of human quality and mutual understanding is what makes it possible to bring to life the product we are seeing today," says **Neus Riera, Managing Director of Nadico Spain**, and continues: **"In a highly professional but also very human environment, easy and agile synergies are created, enabling any event or circumstance to be addressed very efficiently."**

Finally, when asked what he would highlight about Nadico, **Santi Clapé** concludes: **"Nadico has the full spectrum of the industrial sector, which allows us to learn a great deal. I hope Nadico has also learned from us."**
